

TRANSICON

Appointment of new Systems Engineer

October 2008 – The Telford-based control systems integrator Transicon Ltd has further strengthened its project engineering team with the appointment of Mike Mason.

With a track record of more than 25 years design experience with servo drives, PLC and HMI equipment, Mike takes up this new position with responsibilities for delivering the company's control and automation solutions.

“Mike's appointment reflects the Company's continuing success in expanding our customer base during the past year,” says Transicon's Managing Director, Paul Blake. “We recently celebrated our first year in the new facility, a year in which we have seen a steady increase in our sales and profitability - expansion of our engineering capability underlines continuing investment for the future. I am therefore delighted to welcome Mike to the Transicon team, especially as he has first hand experience of providing engineering solutions in the food & beverage industry which we are targeting to continue our development of new market segments“

“His industry knowledge and expertise will be invaluable in further developing new customers to reinforce Transicon's position as a leading supplier of industrial drives, automation and control systems.”

About Mike Mason

Born in Wordsley and educated in Droitwich & Worcester, Mike completed his full technical engineering apprenticeship with Heenan & Froude in Worcester. He is fully qualified in control systems & applications. He joins Transicon after gaining extensive servo and systems integration experience in his own business and lives in Shrewsbury.

About Transicon Ltd

Telford-based Transicon has a pedigree than 40 years experience in the design, manufacture, installation and commissioning of drive and automation solutions. The company's offerings include drives systems, PLC and SCADA software programming, HMIs, motor control centres and custom-built panels, as well as high accuracy AC, DC and servo drives and motors.

Certified to BS EN ISO 9001:2000 quality standards, BSI-registered and an NICEIC-approved contractor, Transicon also offers a comprehensive range of management, consultancy, assembly, testing and support services to customers throughout the utilities, manufacturing, process engineering, marine and automation sectors.
