## TRANSICON GEARS UP FOR CONTINUED EXPANSION

### Control systems specialist relocates to larger site in Telford

**25 April 2007** – Transicon Ltd, the Telford-based control systems integrator, has expanded its operations by relocating to new headquarters at the town's Cherwell Enterprise Park.

The company's new Hortonwood 2 facility is more than twice the size of its previous site at Horton Park Industrial Estate, underlining the 20-strong company's growth since it moved to Telford six years ago.

"By winning major original equipment and refurbishment contracts in the utilities, manufacturing, process engineering and automation industries, we have consistently increased sales and profitability over the past four years," says Transicon's managing director, Paul Blake.

"More recently, we have expanded our installation, support and consultancy services and diversified our customer base by securing several important orders in the automotive, food handling and precision engineering sectors. As a result, we have simply outgrown our previous site."

The new building provides more than 11,000 square feet of space. This will allow further expansion of Transicon's engineering services department, as well as increased stock holding of spares – ensuring the company maintains the highest levels of support to its customers. In addition, the extra space permits the assembly and prove-out of larger turnkey systems prior to shipment, installation and commissioning.

"It also provides room for several new developments that we have in the pipeline, which will see further strengthening of our engineering team," Mr Blake continues.

"With demand in the automation sector continuing to show strong growth, I am confident that our new UK headquarters will be an important foundation on which to build future sales across our full range of control system and automation solutions."
