

Telford based system's integrator Transicon, are proud to announce the arrival of a new apprentice, this follows the successful recruitment of Henry Cooper, an apprentice installation engineer.

Henry has completed the first year of his apprenticeship with Transicon which includes on-the-job training and day release to attend Shrewsbury College.

At the end of the three year apprenticeship Henry will gain a qualification in Installing Electro technical systems and equipment.

"Earning and learning is a fantastic route for any young person who wishes develop their skills, whilst being in a work based environment, this allows me to gain practical experience backed with academic qualifications" says apprentice Henry Cooper.

This follows a record year for Transicon, due to popular demand, installation, support & consultancy services have been expanded to meet customer requirements.

"Henry's apprenticeship is an example of Transicon's continued commitment to developing personnel, ensuring that Transicon remains a front runner in the industrial automation industry" Says Transicon's Engineering Director, Ian Turpin.

In addition to the new appointment, Transicon has increased its personnel, giving a new graduate an opportunity to join the business, a company accountant and two sales engineers.

Servicing a number of industries, Transicon offers a complete range of management, consultancy, design, manufacture, installation and commissioning services for AC drives, DC drives, Servo drives, PLC and SCADA systems.
